

MAINTENANCE OPERATIONS STANDARD PRACTICE

Work Order Standard
Operating Practice

INSTRUCTION NUMBER:
75-0002

What is CMMS?

CMMS stands for Computerized Maintenance Management System, eMaint is the CMMS we use for moving equipment through all stages of the Gravity Production process (from initial Inspection to Final Quality Control). eMaint lets you enter in all needed work orders electronically, when properly managed, eMaint can prioritize the order in which equipment is worked on and ensures success, by matching the skill level of the technician to the skill level of the work order. It tracks equipment through the entire Gravity Production process to ensure that equipment meets our standards.
