

*Keep Your Equipment Running and Making You Money*

# DNCO – Do Not Change Oil

*Patent Pending*

This revolutionary patent pending device drastically reduces day to day operating expenses, reduces downtime and increases engine life; all while being environmentally friendly. An exclusive product sold and serviced by EUROPUMP is now proving its worth to several operators using natural gas powered engines on hydraulic skids in the PC pump business.

DNCO Oil Mate is an oil filtration and management system which is capable of continuous oil change without shutting down your equipment. By continuously re-injecting new oil back into the engine, this system has eliminated the need for an auxiliary filter system and significantly reduced the need for routine oil and filter changes.

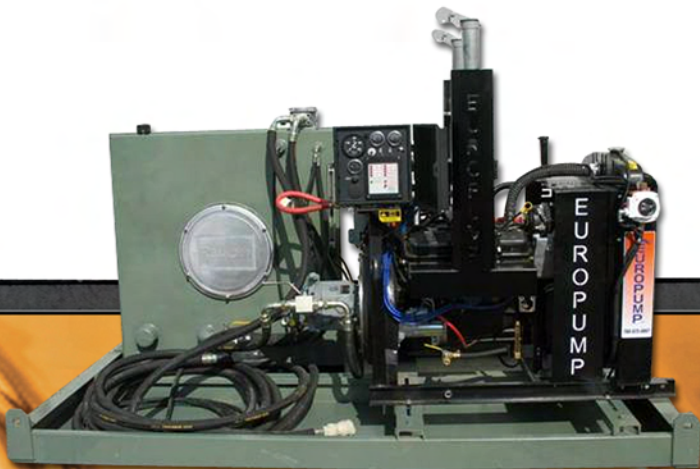

## DNCO ADVANTAGES

- Reduced Well Downtime
- Extended Engine Life
- Reduced Manpower for Routine Maintenance
- Extremely Operator Friendly
- Easy to Monitor Engine Usage
- Quick Change Filter Manifold with By-Pass Circuit

## ENVIRONMENTALLY FRIENDLY

- Reduced Handling & Storage of Used Oil
- Reduced Risk of Spills & Clean Ups
- Reduced Oil Disposal

# OilMate™

Patent Numbers 4,869,346 / 5,390,762

Oil Mate™, the main component in the DNCO system, is an advanced oil management system for engines that significantly extends oil change intervals and filter life in order to decrease downtime and lengthen an engine's life span. It is an automatic oil exchange system for any engine – it changes oil while the engine is running!

The Oil Mate™ extracts a small amount of used oil from the crankcase and sends it to the fuel tank. The used oil is then blended with the fuel and burned during normal combustion. Simultaneously, it adds the same amount of fresh oil from the make-up tank into the engine.

## INCREASED BENEFITS

- 4,000+ Hours Between Oil Changes
- 2,100 Hours Between Filter Changes
- Easy Installation
- Compact Size
- Converts Used Oil Into Productive Energy
- Minimizes Waste Handling & Disposal Costs

## ENHANCED ENGINE PROTECTION

- Constantly Replenishes Oil Additives
- Keeps Oil Properties at Ideal Level
- Increases Engine Durability & Life
- Maintains Cleanliness of Fuel System
- Increases Injection System Life
