

GRAVITY HAS SOLUTIONS TO KEEP OPERATIONS RUNNING

WELLBORE SOLUTIONS

Gravity's line of wellbore solutions gives our customers options that help to establish, maintain and improve the production of an oil and gas well throughout its productive life.

Production Chemicals

We provide a vast array of chemical products and services for water treatment, enhanced productivity, oil and gas recovery, and overall field asset optimization. Our Tech Management team will take the time to review your current processes and work closely with you to determine the most effective chemical program that will yield the greatest results.

Capillary Injection

Our Gravity Capillary Management team has developed injection strings installed either internally or externally, to deliver chemicals downhole effectively. Delivering chemicals to the source of the problem, and at the most effective depths, maximizes the chemical effectiveness for each treatment.

WATER SOLUTIONS & INFRASTRUCTURE

We approach water management with an infrastructure mindset, leveraging our expertise to develop comprehensive water sourcing, take-away, disposal and reuse solutions for operators across the Permian and Williston Basins.

Disposal

Gravity now owns and manages more than 50 active saltwater disposal wells with more than 1 million barrels per day of permitted disposal capacity. Disposal capabilities are focused in the Permian and Williston Basins.

Transport & Transfer

We also transport and transfer fluids using our large fleet of fluid transportation trucks and our infrastructure of permanent pipeline or temporary transfer hose.

Sourcing

Gravity will also identify and acquire source water where needed, and facilitate the required regulatory and permitting documentation. Gravity technicians will monitor water levels and quality for sustainable production.

CONTAINMENT & SURFACE RENTAL

Gravity offers a large inventory of surface rental equipment from fluid storage to site lighting.

Containment

Gravity has an extensive inventory of over 5000 portable fluid storage tanks to meet a variety of applications.

- Frac Tanks
- Pre-mix Tanks
- Open-top
- Mobile Ponds
- Mud Tanks
- Half Pits
- Catch Tanks
- Flow-back Tanks

Surface Rental Equipment

Beyond lighting and power equipment, we answer the needs of production crews or construction crews by offering portable lighting, rental safety equipment, vacuums, pumps, and more.

POWER GENERATION

Reliable, cost-effective power used as primary or back-up power or in remote locations where pole power is not yet available.

Natural Gas Generators

Natural Gas Generators reduce overall fuel expense by burning propane, produced well head gas or flare gas instead of trucked fuel, for a more environmentally friendly and efficient power option.

Gravity offers 45 kVA to 450 kVA single generator power or up to 6,400 kVA parallel generator power.

Diesel Generators

Gravity Diesel Generators provide 3-phase 240/480v output or single phase 120/240v output. Generators are sound-attenuated for quiet operation and have extended run-time fuel tanks.
